How Snowflakes Became Beautiful

Ririro

Once upon a time, hydrogen and oxygen were two invisible friends who lived together in the sky. They were always drifting around, never really staying in one place for too long.

One day, they decided that they wanted to be beautiful and admired like the stars and the clouds. But they didn't know how to make themselves visible.

"We need to find a way to make ourselves beautiful and admired," said hydrogen.

"But how?" asked oxygen. "We're invisible!"

Hydrogen thought for a moment, then she had an idea. "I know! We can form snowflakes and fall to the ground. That way, people will be able to see us and admire our beauty."

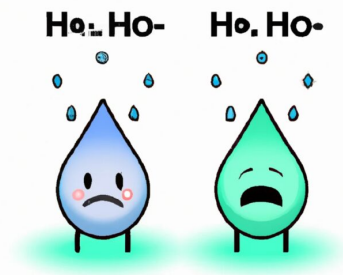

Oxygen wasn't so sure. "But how will we make sure that people will admire us?" he asked.

"We'll make sure that each snowflake has six sides," said hydrogen. "That way, they'll be unique and special, just like us."

And so, hydrogen and oxygen worked together to create snowflakes with six sides. They were so proud of their creations that they couldn't help but smile as they fell to the ground.

As the snowflakes reached the ground, people began to notice them. They were amazed by the beauty and uniqueness of each snowflake, and they admired them for their perfect six-sided shapes.

Hydrogen and oxygen were thrilled to finally be seen and admired. They knew that they had found the perfect way to make themselves beautiful and special, and they were happy to have found their place in the world.

Stories help us explore cultures, learn moral lessons, connect with nature — or simply have fun. That's why ririro.com offers 3,000+ free stories — fairy tales, fables, bedtime stories, myths and more — for every age, in 13 languages, with free printable PDFs and often audio. Reading should be a right, not a privilege. Share

ririro.com and spread the joy of reading.
